## Motivations

#### Main Motivation

Effective and efficient combination between proactive and preventive fault tolerance strategies.

#### Challenge

Checkpoint interval selection problem.

#### Motivations

#### Main Motivation

Effective and efficient combination between proactive and preventive fault tolerance strategies.

#### Challenge

Checkpoint interval selection problem.

#### Objective

Advanced models to shape the relation between the occurrences of failures and the failure prediction mechanisms in HPC.

8

◆□▶ ◆□▶ ◆豆▶ ◆豆▶ - 亘.

## What is Modeled ?

#### Main focus

- The distribution of interval of time that separates false negative alerts.
- The relation between the original failure distribution and the obtained false negative distribution (relation between  $Y_i$  and  $U_i$ )

#### • Classication based on the randomness tests (iid vs non-iid)

<ロト < 団ト < 巨ト < 巨ト = 巨

 $\mathcal{O} \mathcal{Q} \mathcal{O}$ 

- Classication based on the randomness tests (iid vs non-iid)
- Most of the available failure traces are not random and so are suitable for use as empirical data for probability fitting.

< □ > < 同 > < 臣 > < 臣 > □ = □

 $\mathcal{A}$ 

- Classication based on the randomness tests (iid vs non-iid)
- Most of the available failure traces are not random and so are suitable for use as empirical data for probability fitting.
- Failure prediction mechanism is a good tool to catch the non randomness and correlation.

 $\checkmark Q (~$ 

• Analyze more deeply the set of systems with a high correlation like system 2 or 20 and isolate sources of non-randomness.

 $\mathcal{O} \mathcal{Q} \mathcal{O}$ 

- Analyze more deeply the set of systems with a high correlation like system 2 or 20 and isolate sources of non-randomness.
- Investigate if a cross-correlation of different time scale has an impact of the prediction mechanism.

◆□▶ ◆□▶ ◆豆▶ ◆豆▶ - 豆!

- Analyze more deeply the set of systems with a high correlation like system 2 or 20 and isolate sources of non-randomness.
- Investigate if a cross-correlation of different time scale has an impact of the prediction mechanism.
- Manage the tradeoff between the precision and the recall.

◆□▶ ◆□▶ ◆三▶ ◆□▶ ●

- Analyze more deeply the set of systems with a high correlation like system 2 or 20 and isolate sources of non-randomness.
- Investigate if a cross-correlation of different time scale has an impact of the prediction mechanism.
- Manage the tradeoff between the precision and the recall.
- Use different sources of failure prediction that concerns different component of the machine.
