C:\Users\jalameda>java -version
java version "1.6.0_19"
Java(TM) SE Runtime Environment (build 1.6.0_19-b04)
Java HotSpot(TM) 64-Bit Server VM (build 16.2-b04, mixed mode)

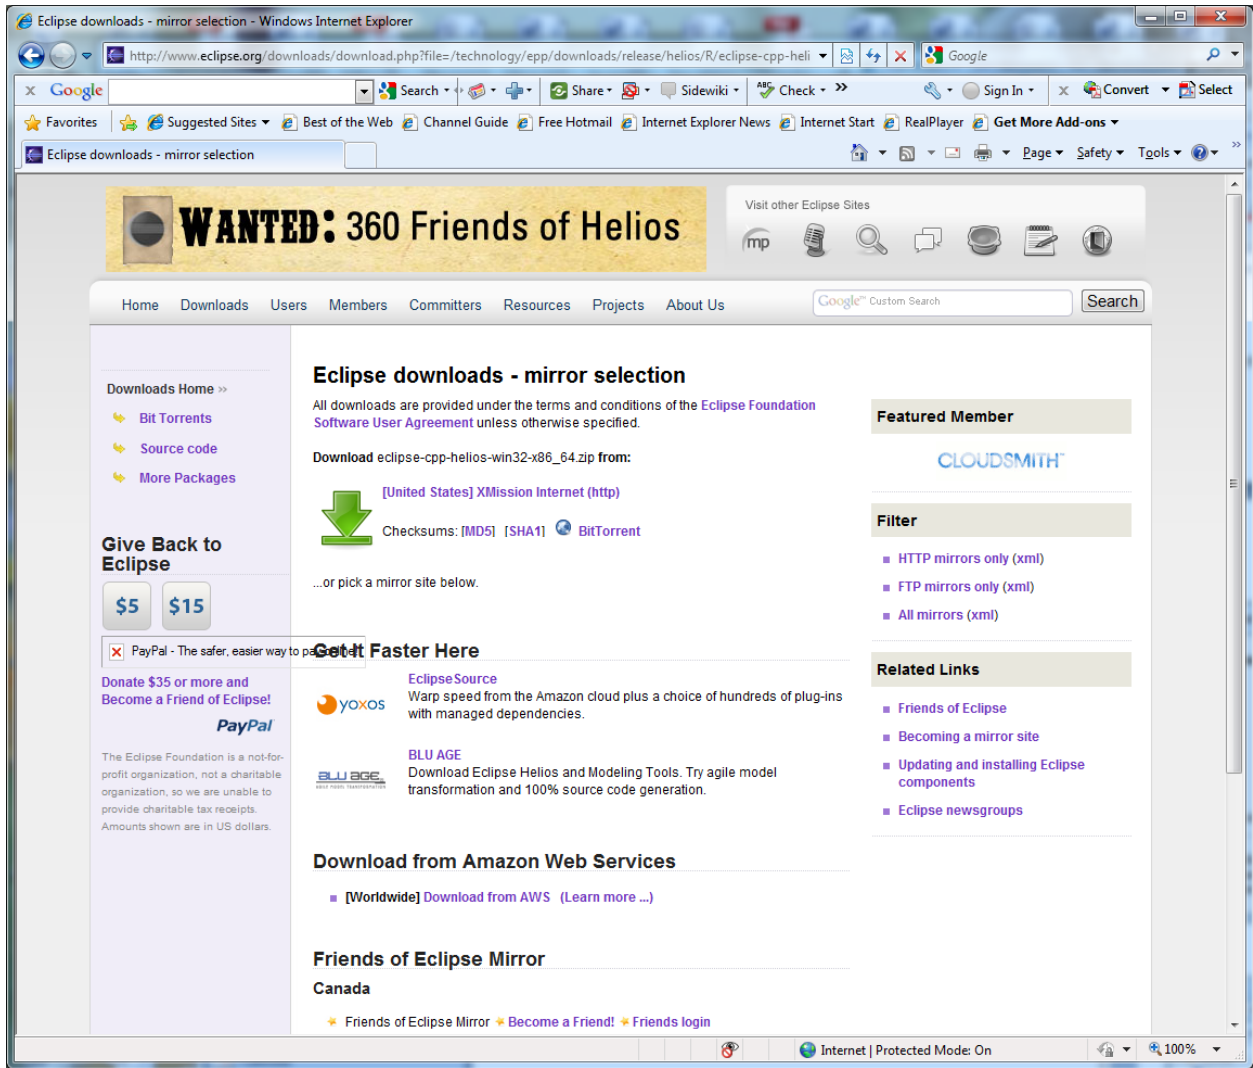

C:\Users\jalameda>
```

Click on Download Eclipse –

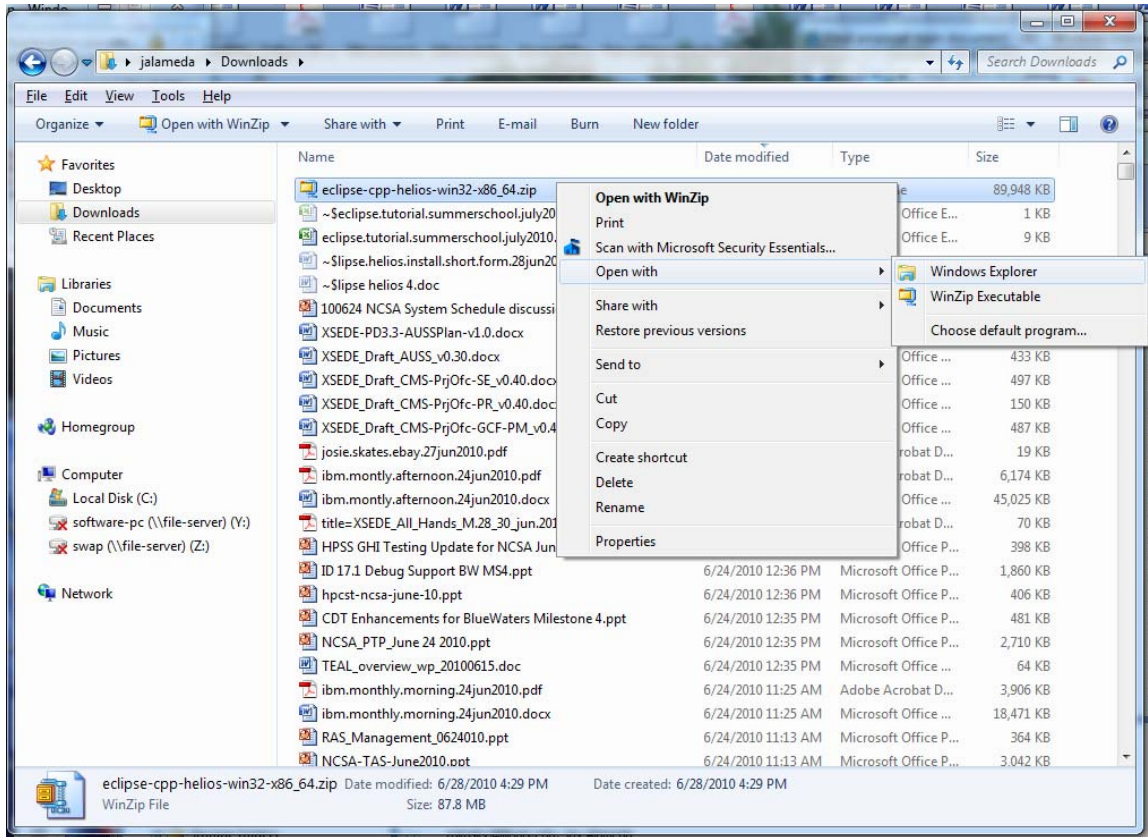

Choose Eclipse IDE for C/C++ Developers as your foundation – download and go –

Chose "Save this file"

Open the archive – (note it should be approximately 90 MB in size)

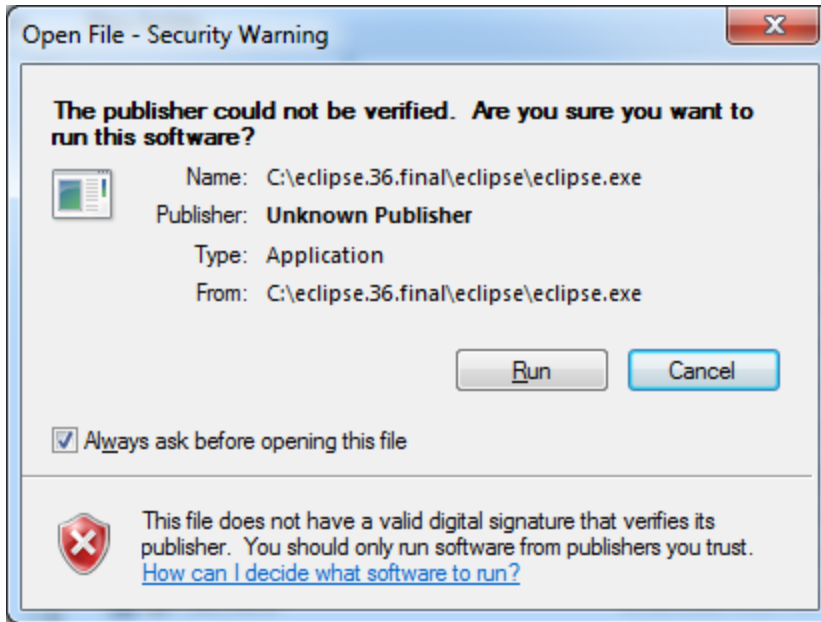

Open the archive, and copy the eclipse folder to a folder close to your root directory (eg, I made a directory called c:/eclipse.36.final and deposited the eclipse folder into this directory –

Open the newly copied eclipse directory – and you will see something like this:

Double click on the eclipse.exe icon (or similar, depending on your operating system)

Windows will throw a flag, tell it to go ahead and run the executable –

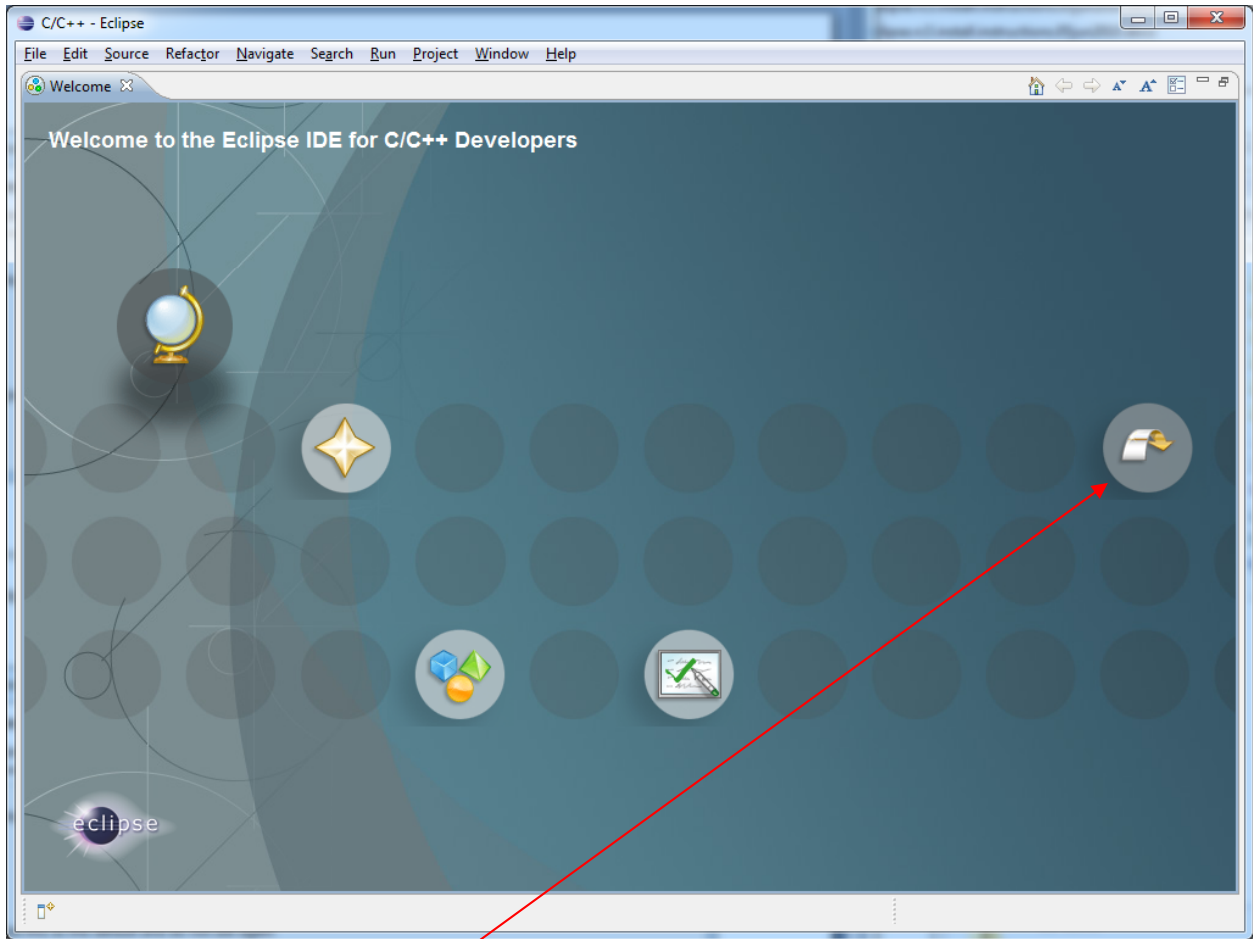

You will get an opportunity to name your workspace –

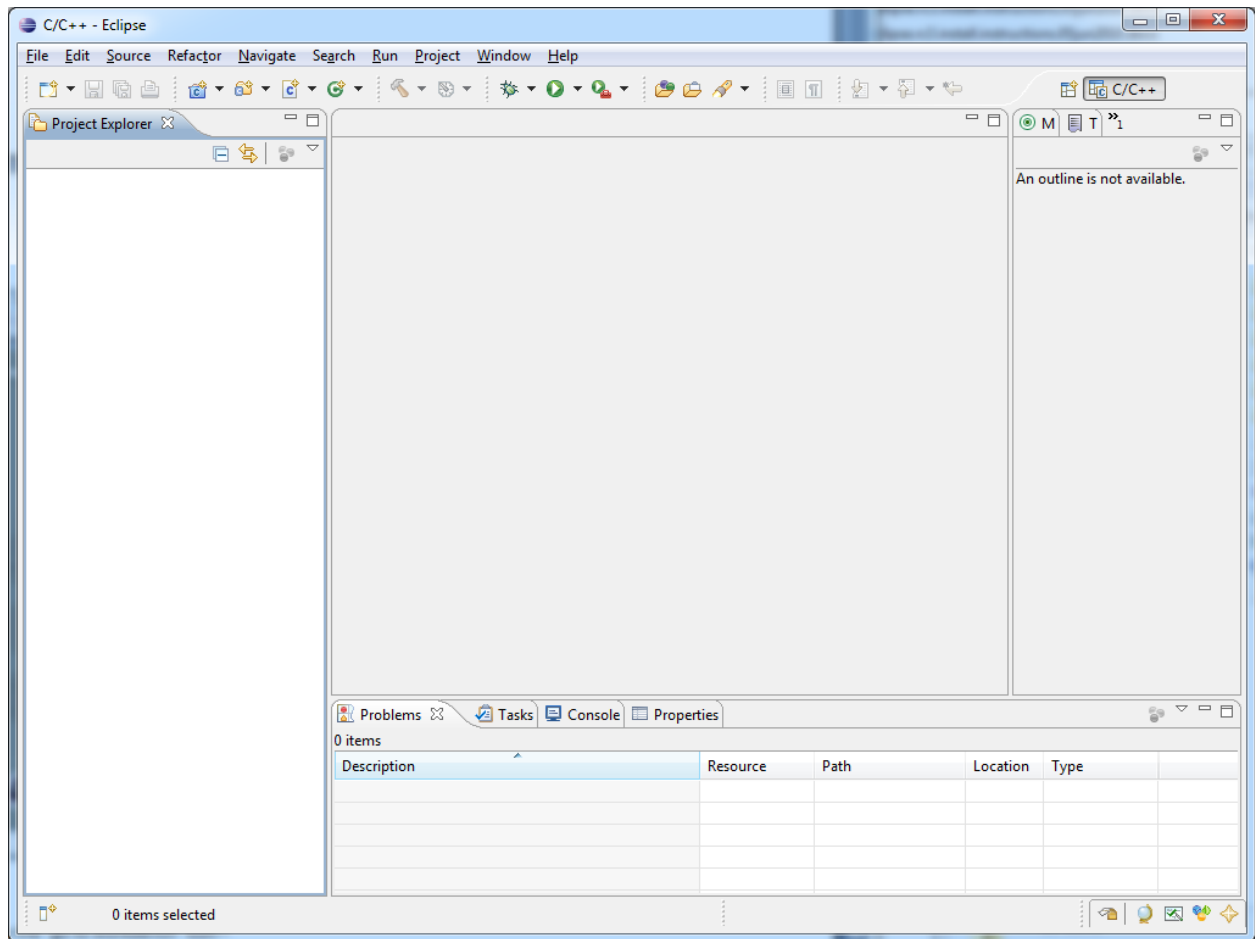

You can simply click OK if you want –

And eclipse will load

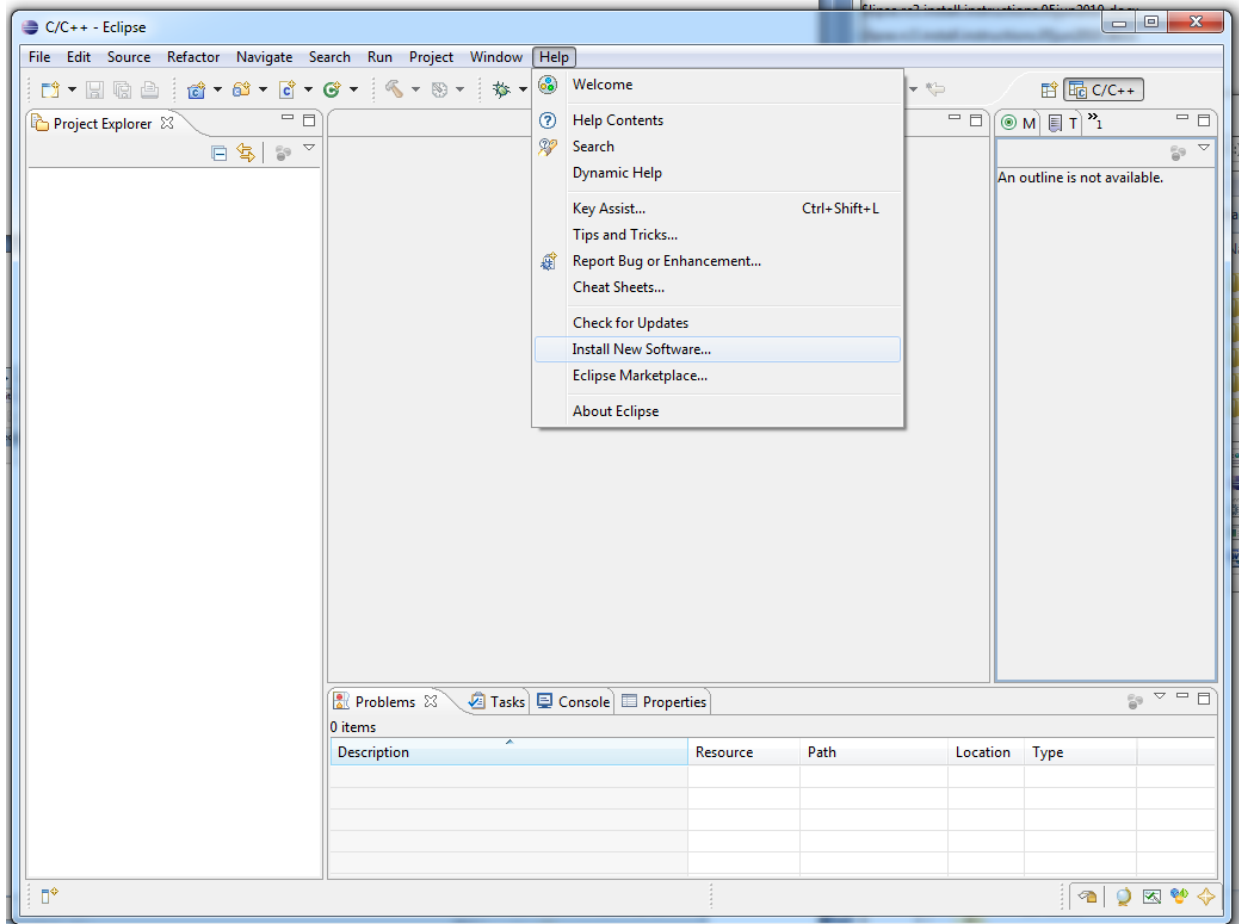

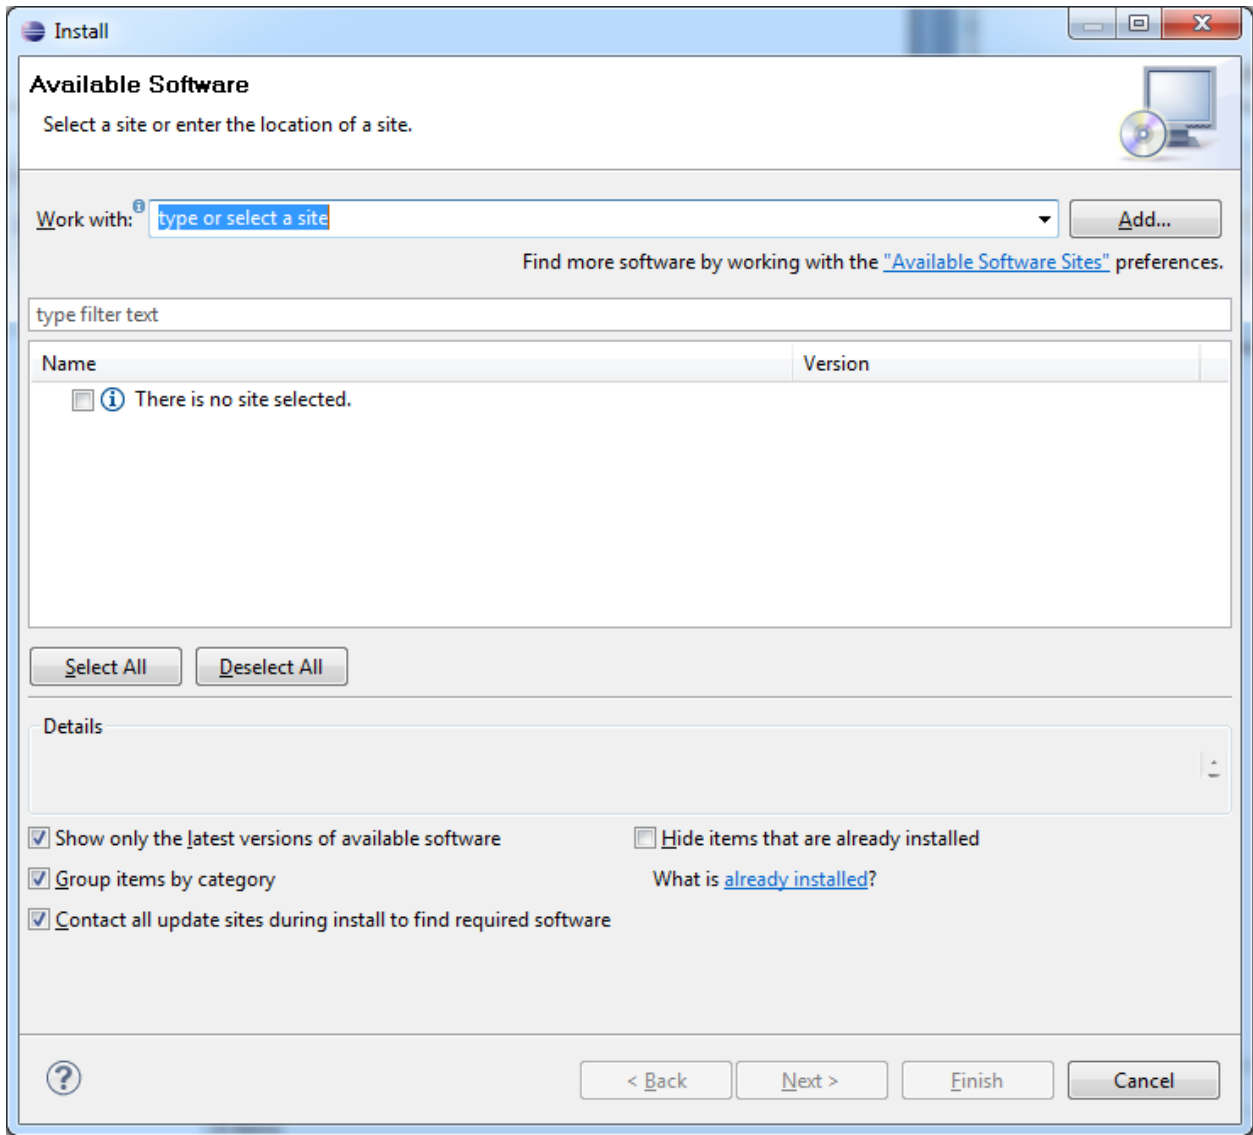

Click on the “go to workbench” icon –

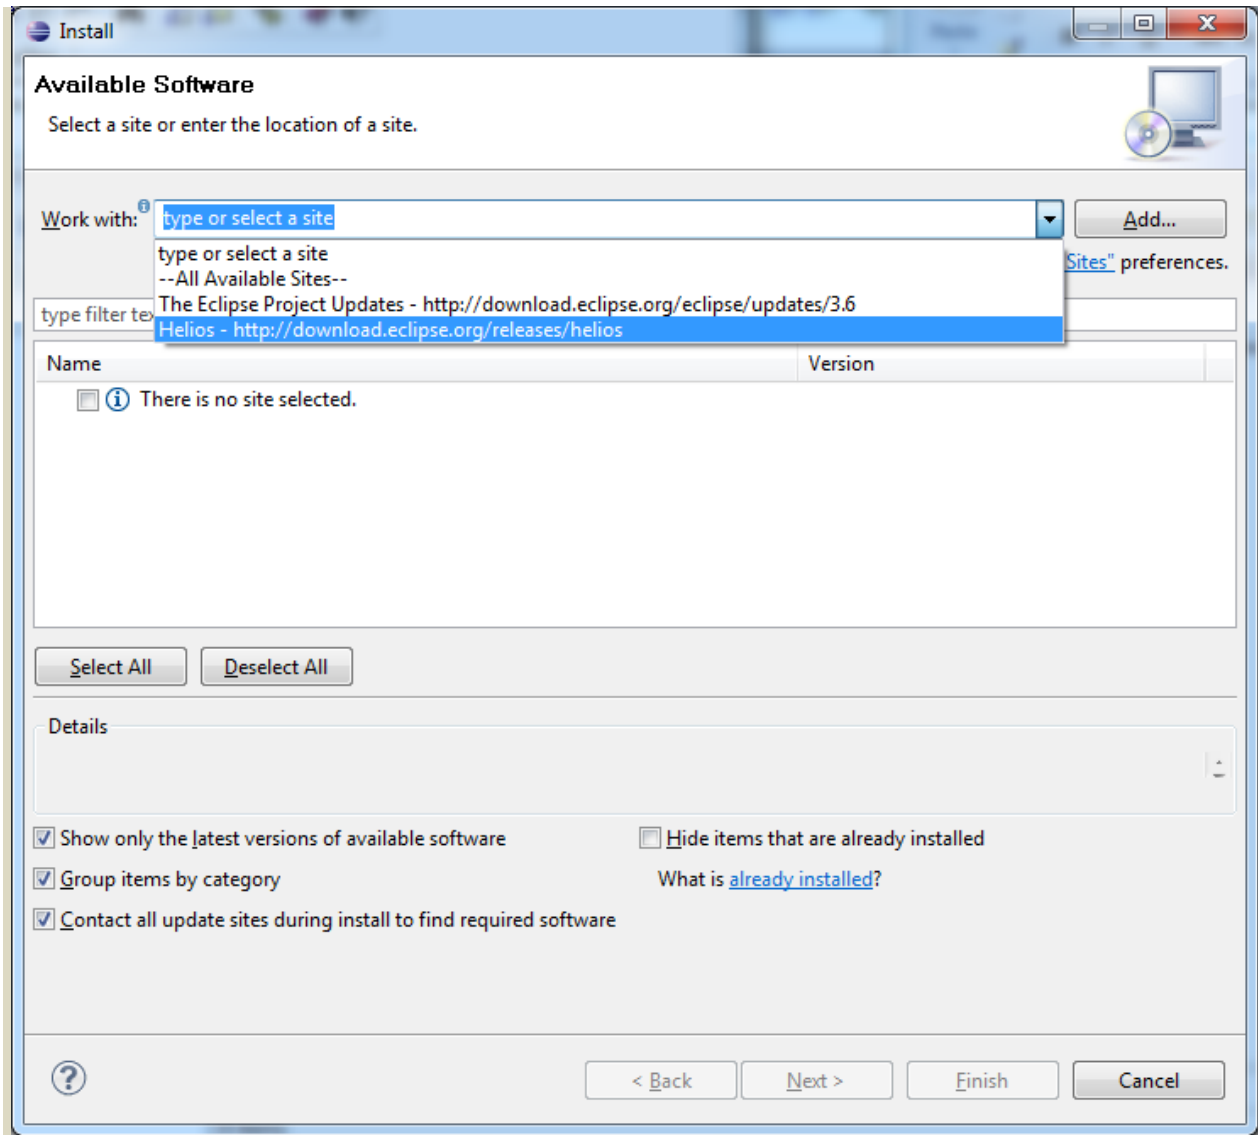

Pull down the help menu and select "install new software" –

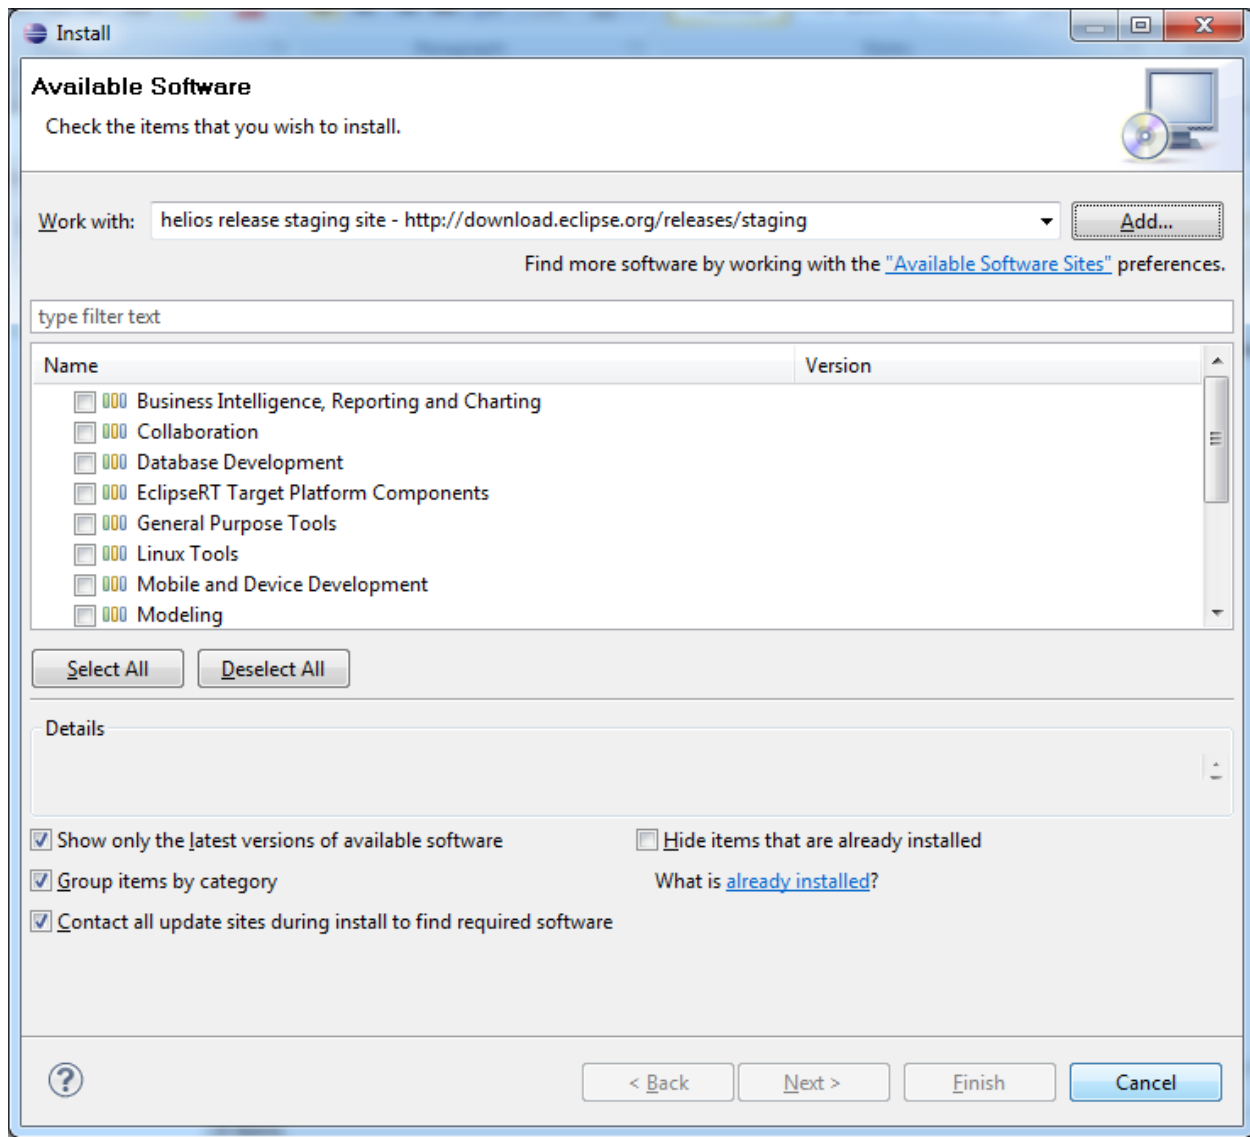

Click "Add" and add a new site – the helios Update site –

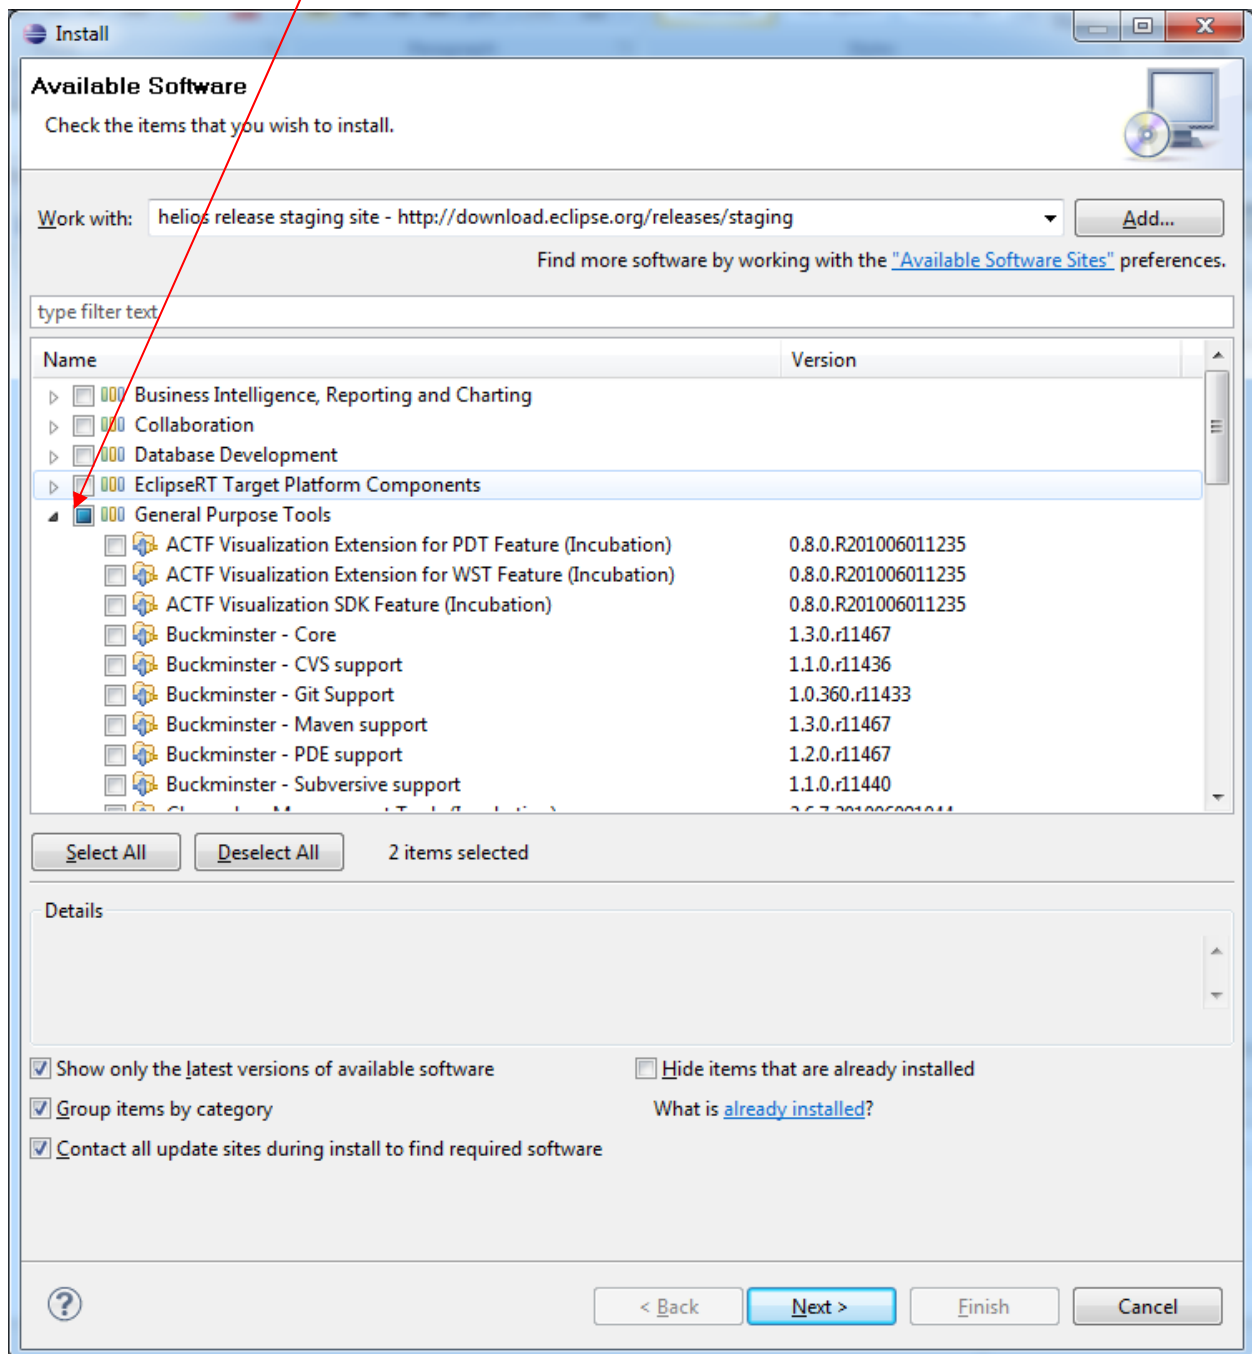

And then you will be presented a menu of eclipse components to choose from:

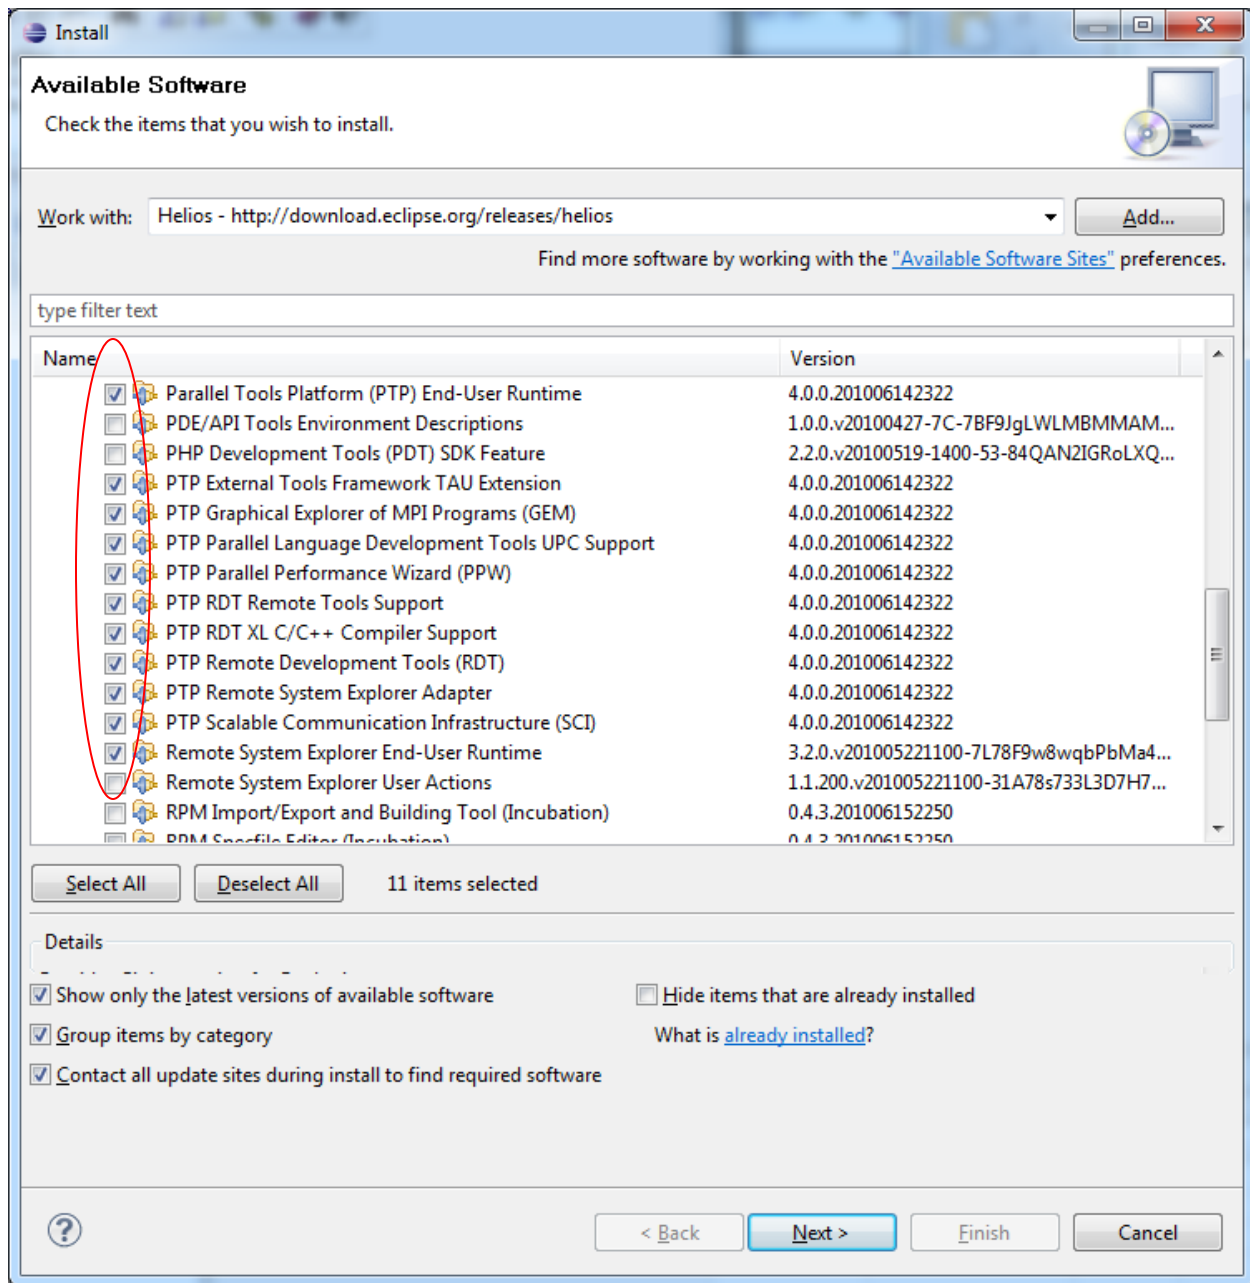

Choose the following component s-

Open **general purpose tools** (click on triangle):

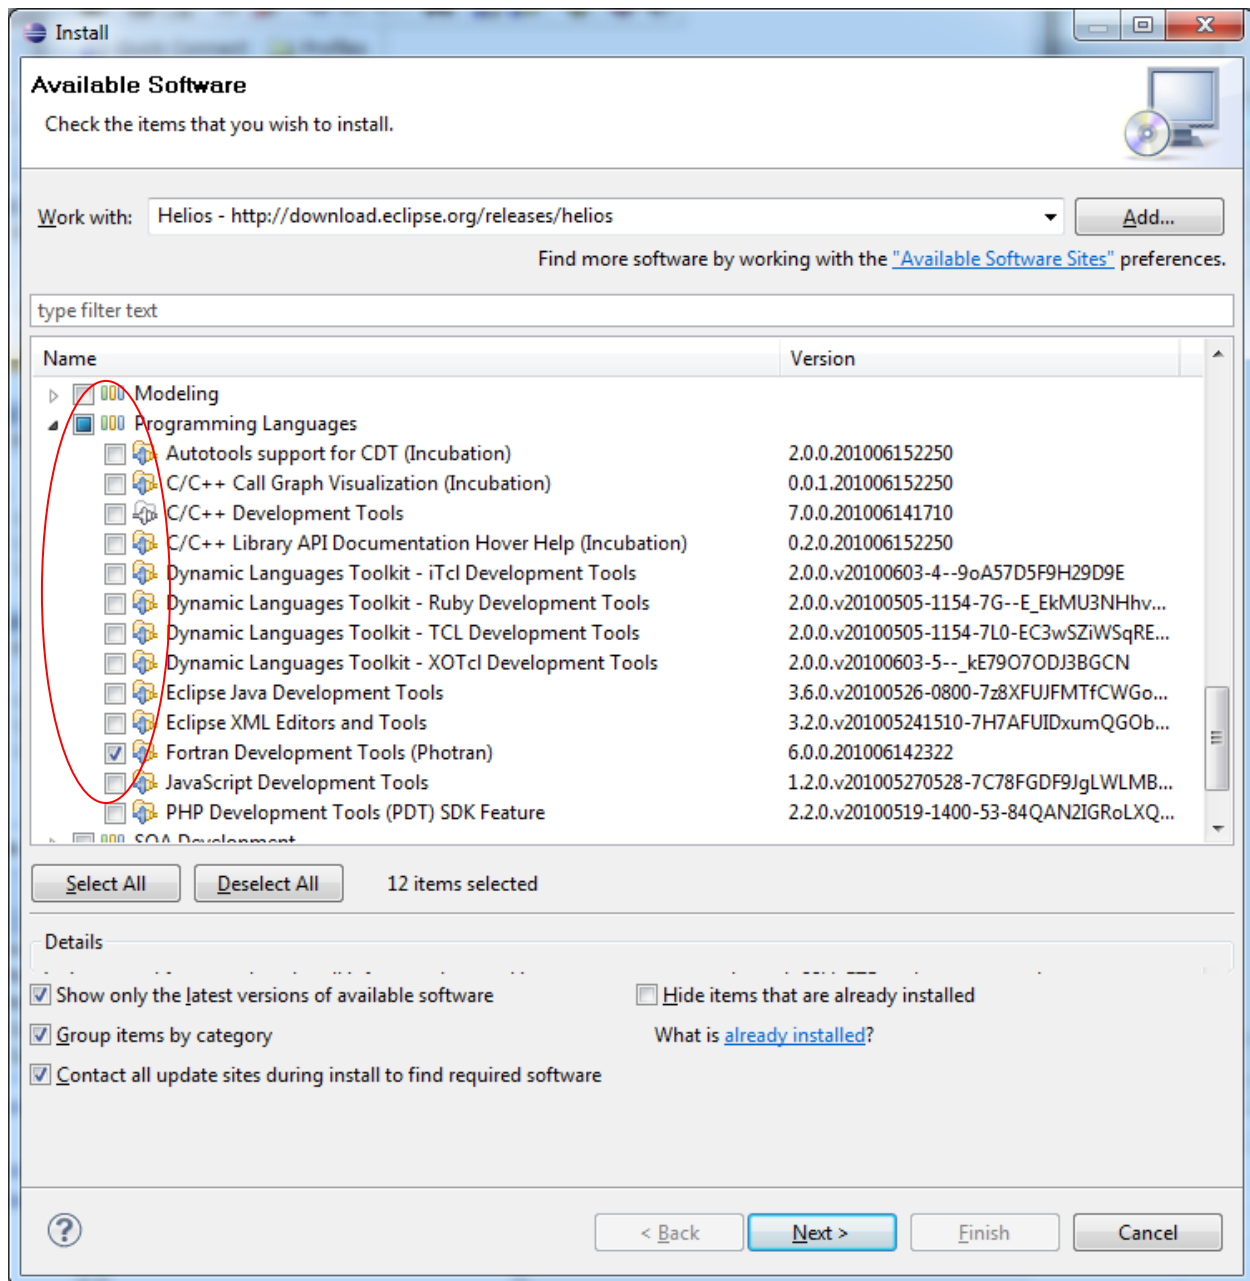

Select components under General purpose tools as shown

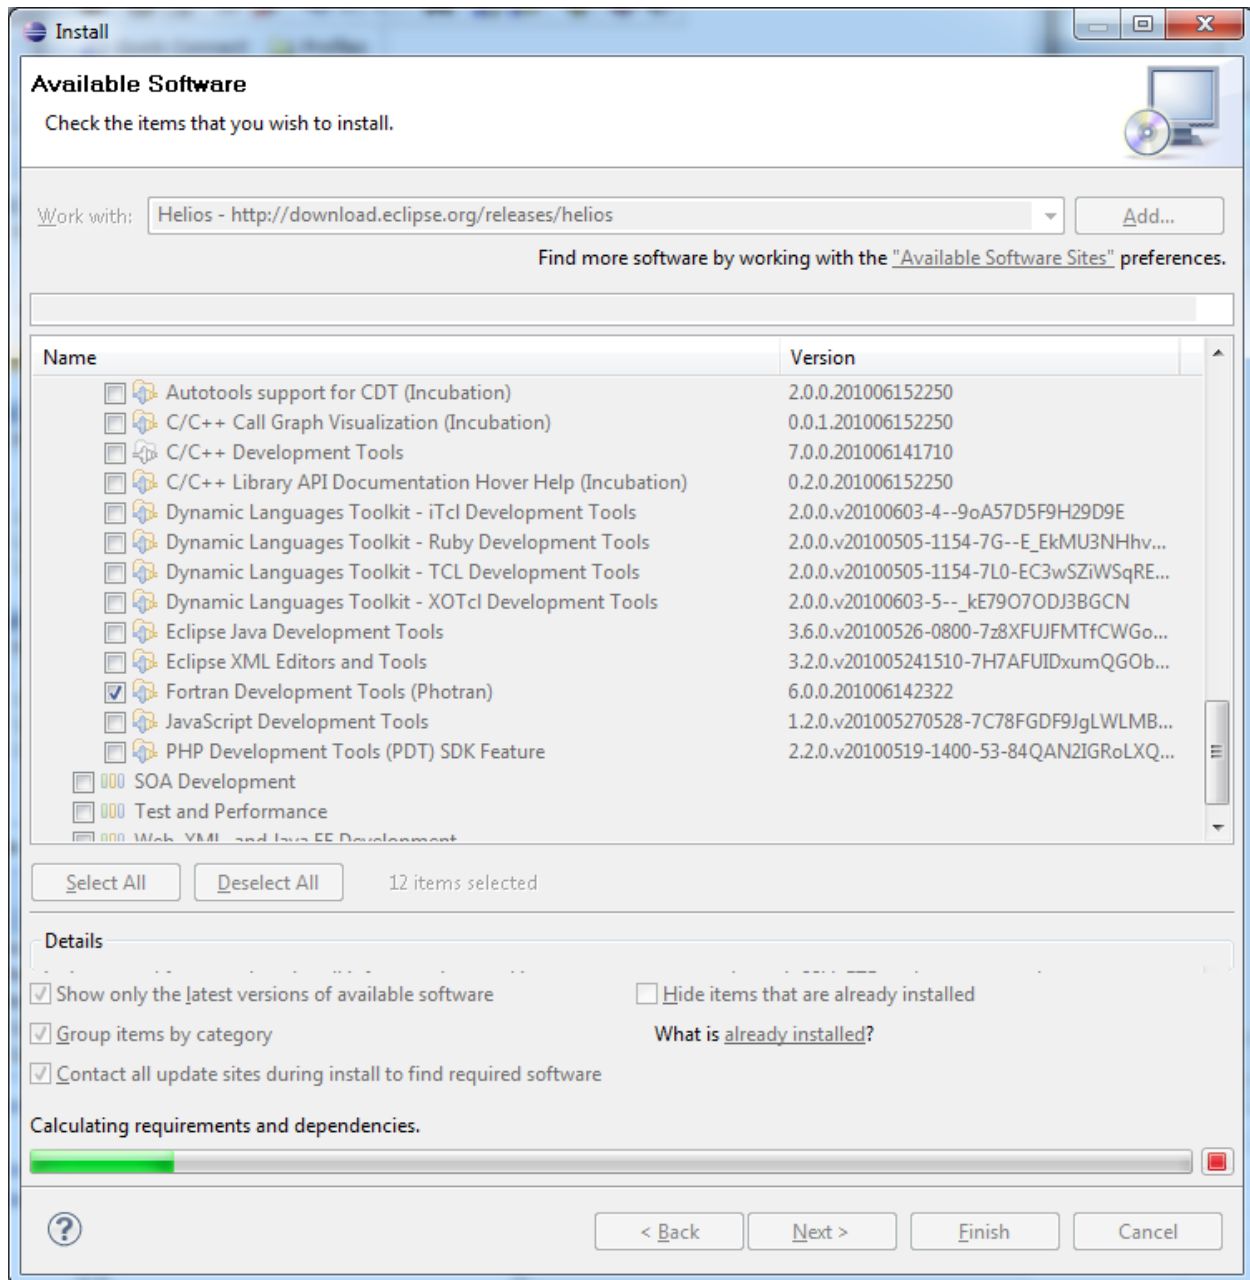

Next, scroll down to Programming Languages, and open that heading, by clicking on the triangle – Choose Fortran language support

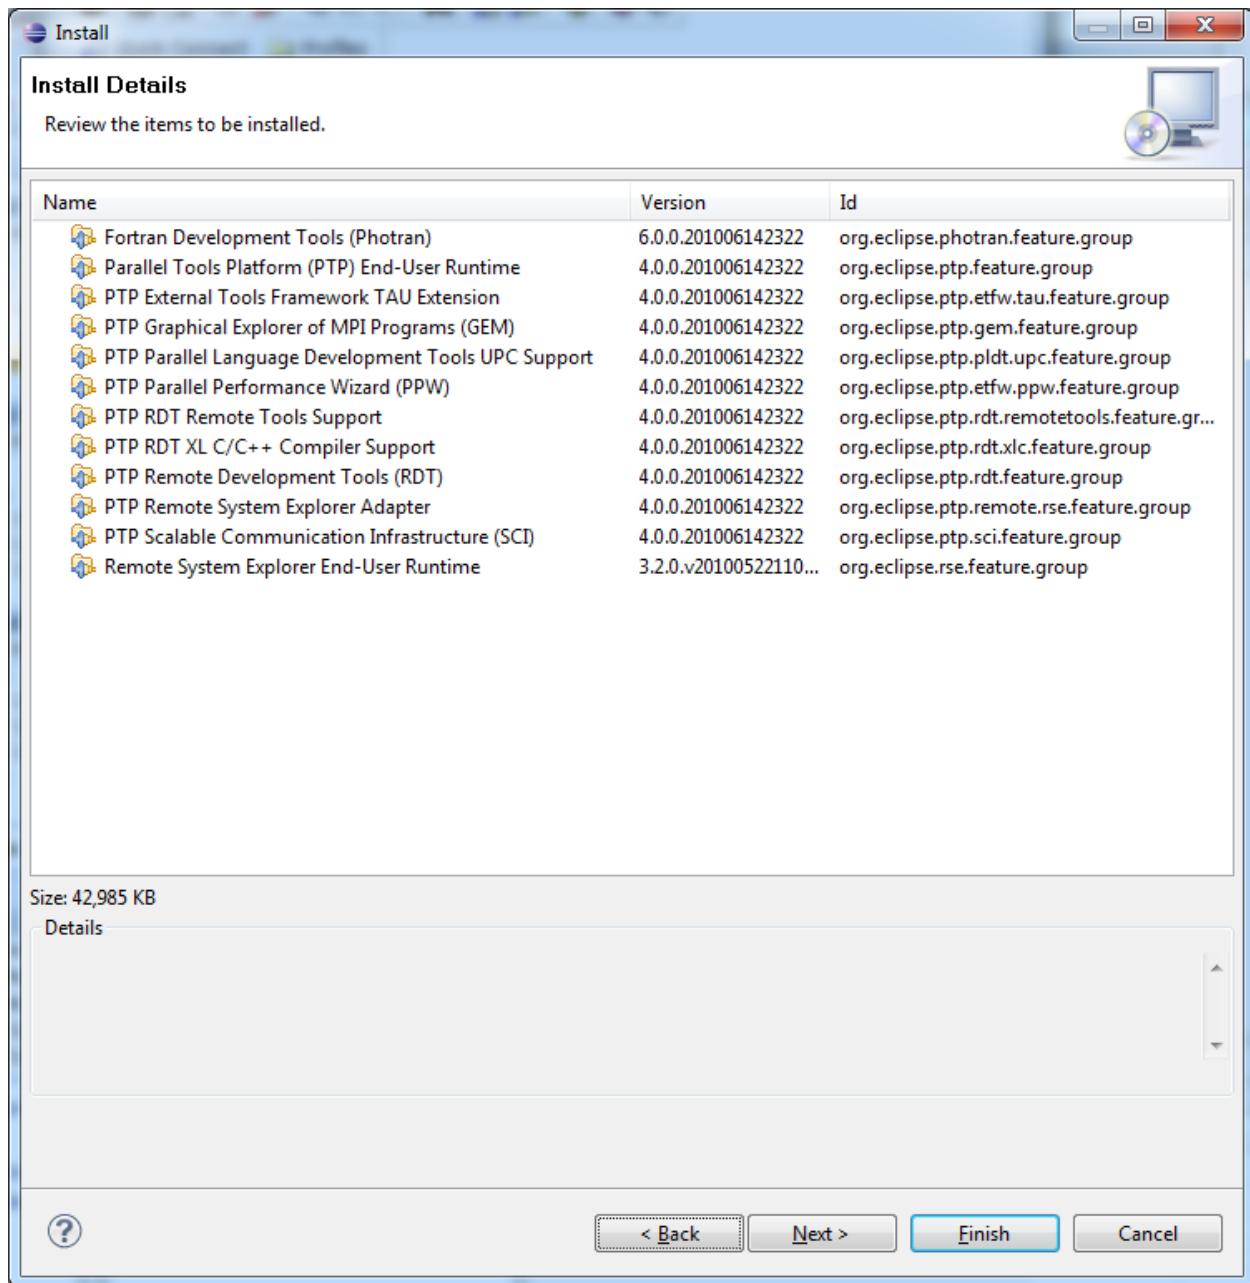

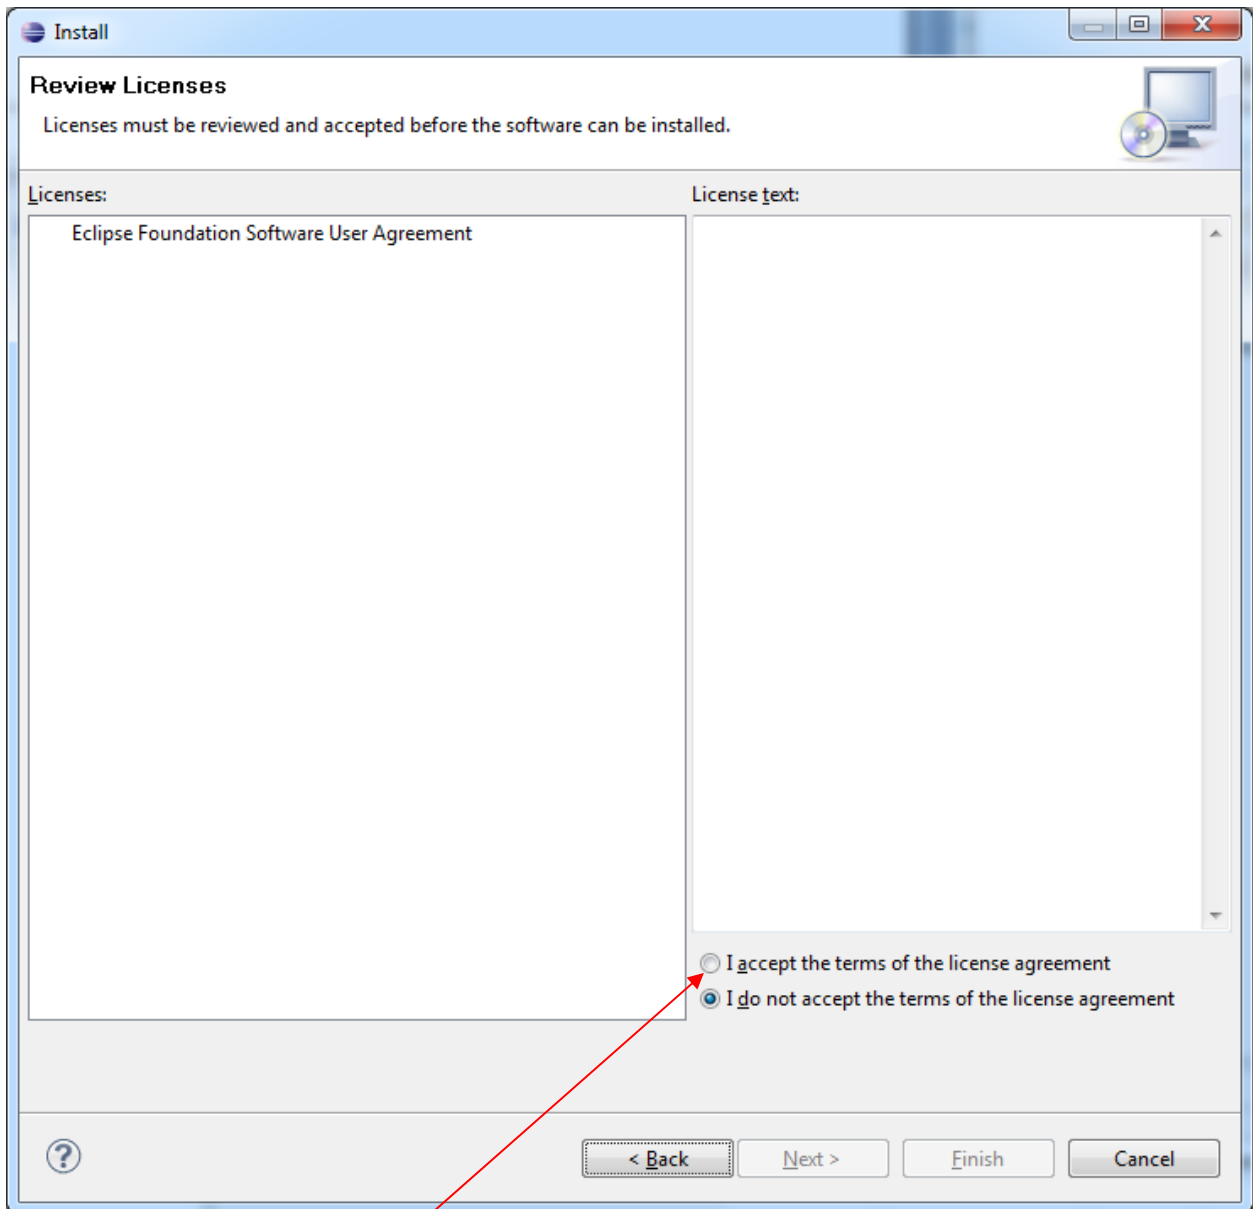

Select "next"

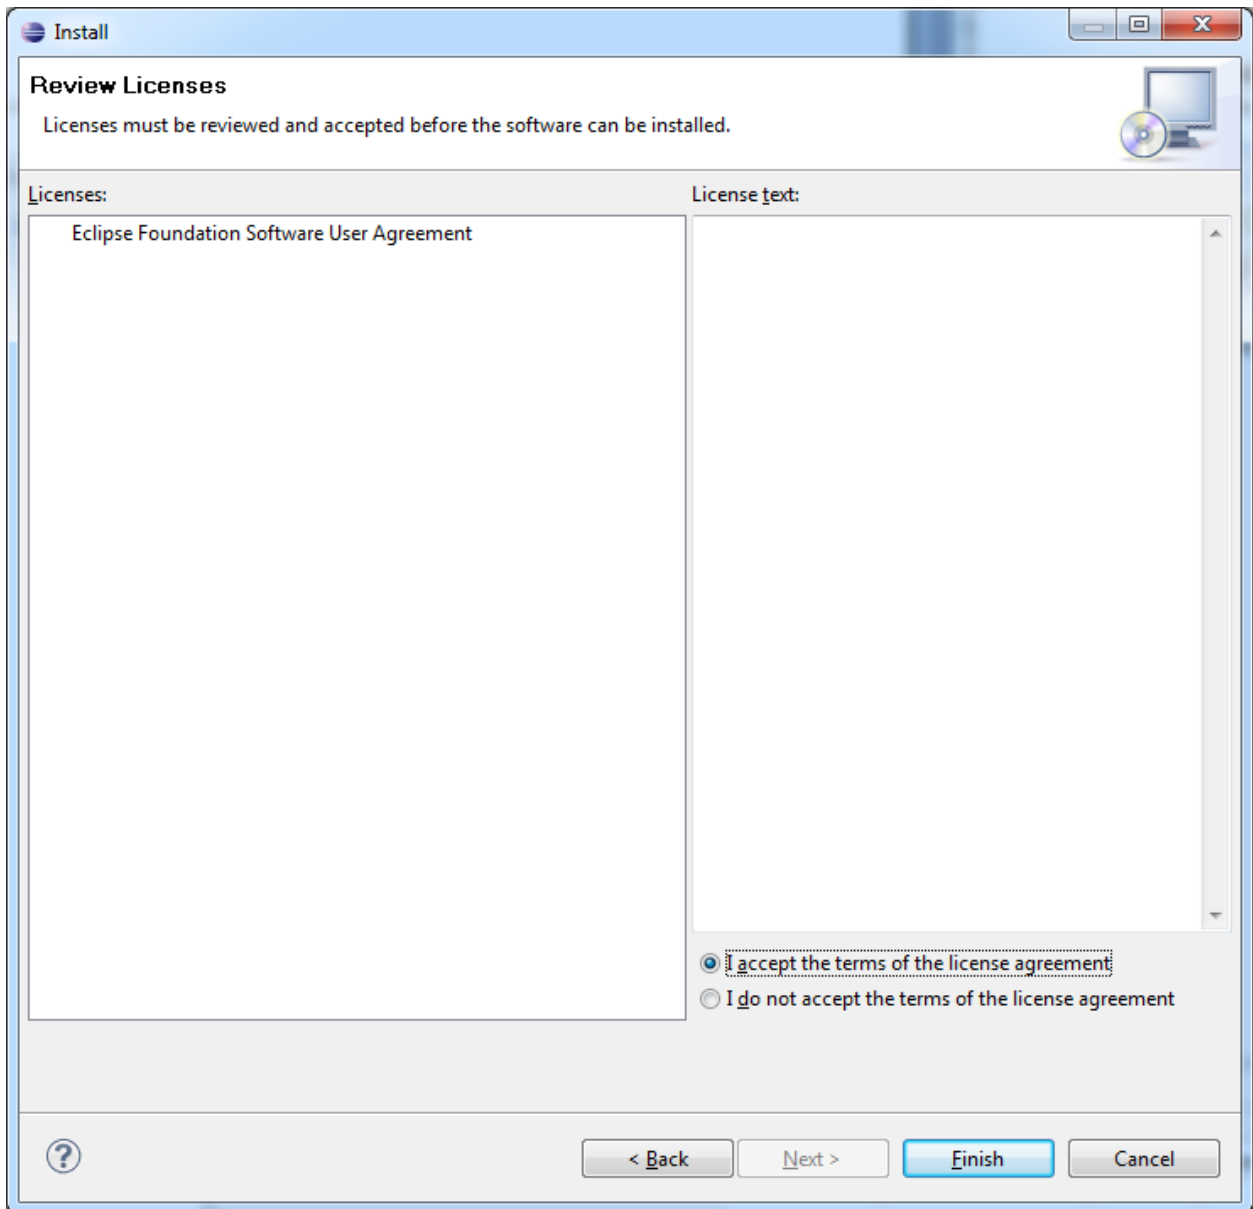

You will get a chance to review your choices:

Select "next"

Accept the terms of the license agreement – and push finish

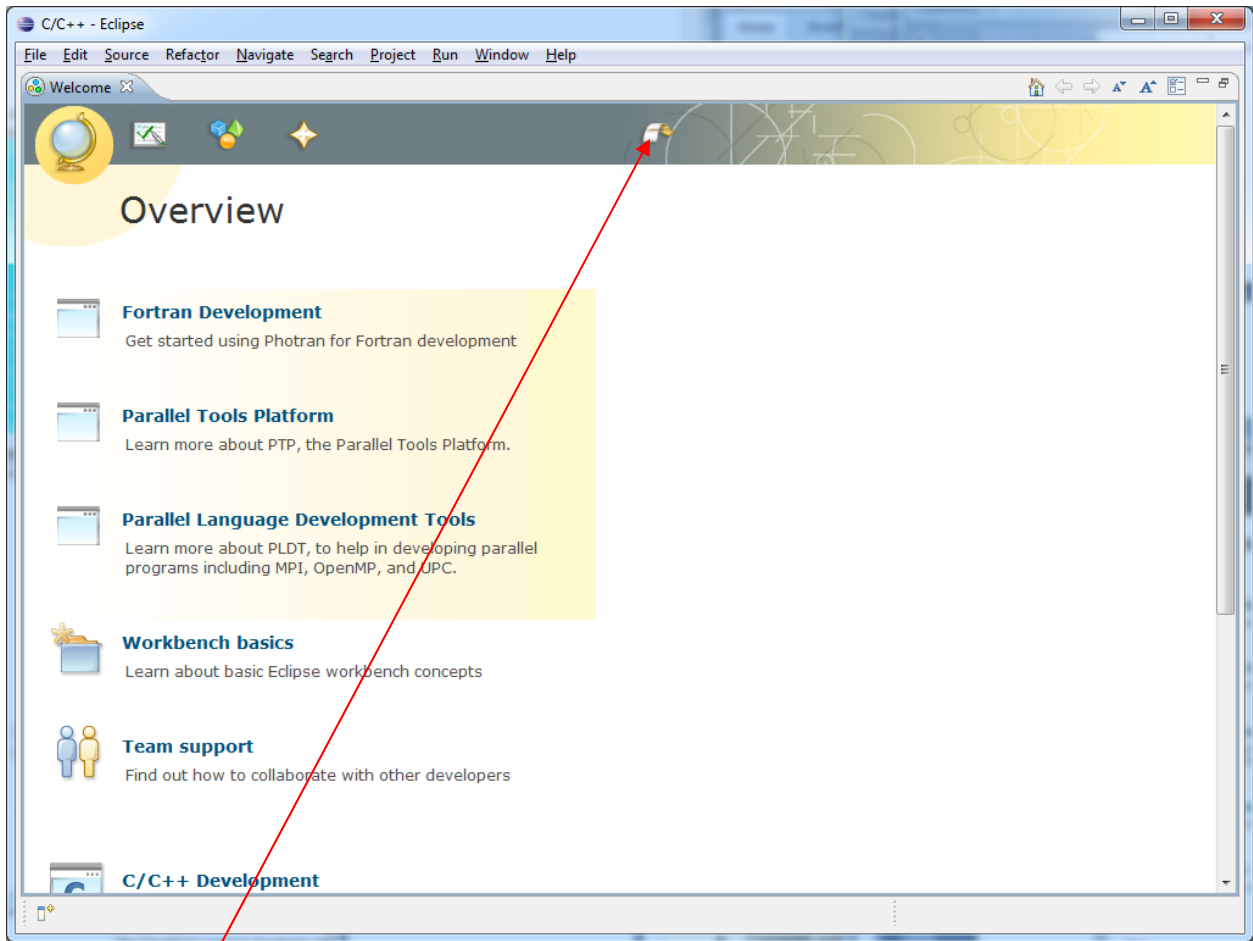

PTP and Photran will install –

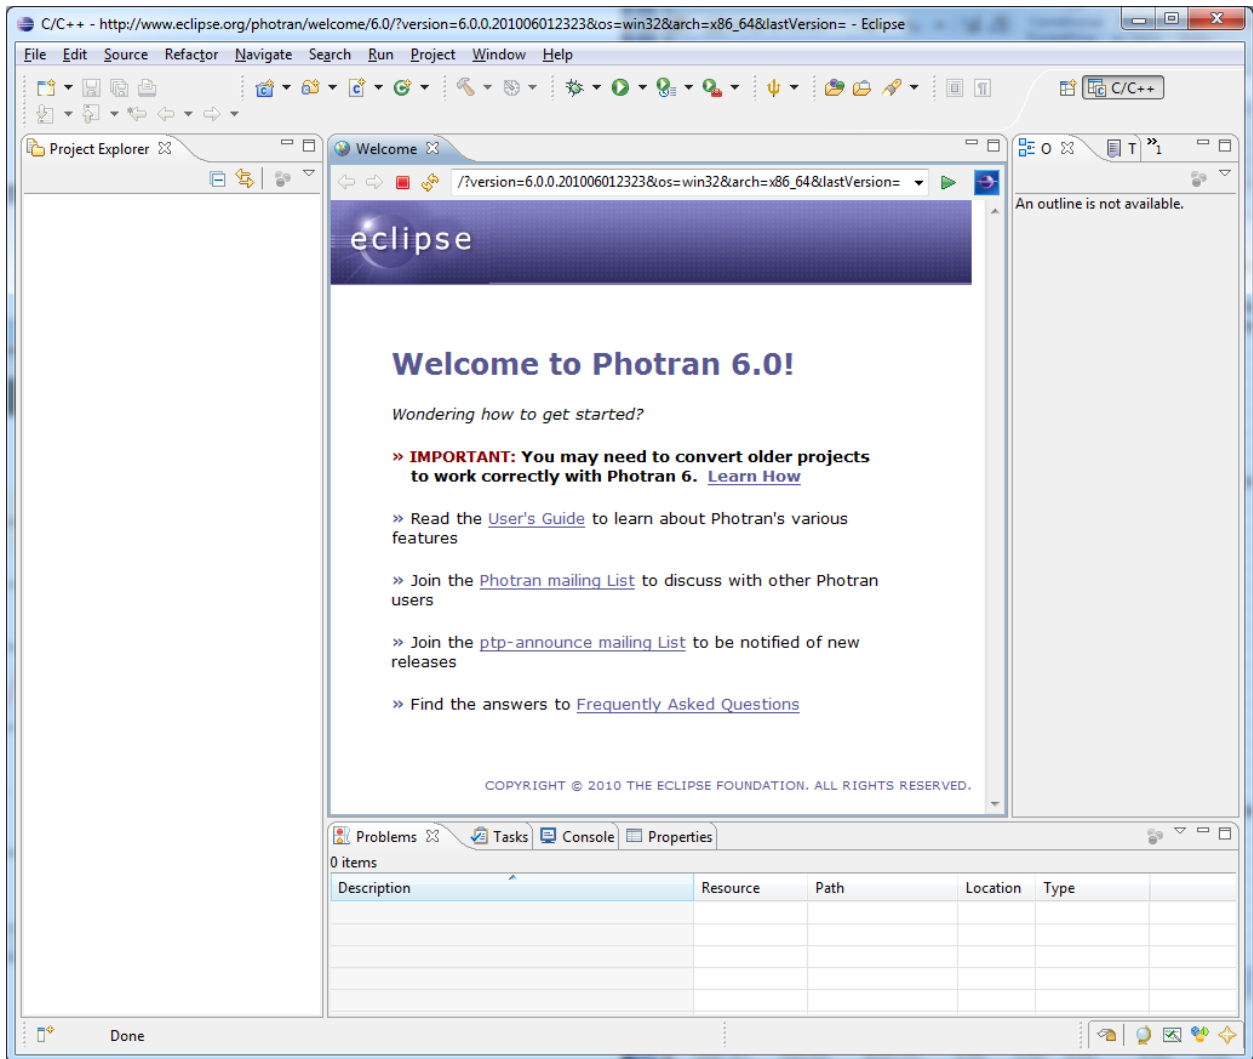

Eclipse will want to restart after the installation completes, go ahead and restart

When Eclipse restarts, you will have a different splash screen – showing what you have just installed –

Go to the workbench again –

And you will see the Photran welcome screen if you installed Photran (else you will see the C/C++ editor)

Close the Welcome screen –
