

NCSA Supports Sirtfi

NCSA's InCommon [identity provider \(IdP\)](#) now officially supports the Security Incident Response Trust Framework for Federated Identity (Sirtfi). InCommon has tagged the [NCSA IdP](#) as Sirtfi-compliant in [federation metadata](#). This enables [cybersecurity researchers at NCSA](#) and other researchers with NCSA identities to access federated services at [CERN](#) and around the world where Sirtfi compliance is required. For more information about InCommon's Sirtfi program, see the [InCommon Sirtfi FAQ](#). The [eduGAIN Entities Database](#) contains a growing number of identity providers, service providers, and attribute authorities around the world that assert compliance with Sirtfi.
