Overview

Our HAL OnDemand HPC portal is an implementation of the Open OnDemand project, which is an NSF-funded open-source HPC portal based on OSC's original OnDemand portal. The goal of Open OnDemand is to provide an easy way for system administrators to provide web access to their HPC resources, including, but not limited to:

- Plugin-free web experience
- Easy file management
- Command-line shell access
- Job management and monitoring
- Graphical desktop environments and desktop applications

First Thing First

Please log via SSH in to **hal** or **hal-login2** first to initialize your home folder on HAL system.

Log in HAL OnDemand

Log in with your own user name and password via the following URL. Note that you need to submit your NetID and password to login to the system.

```
https://hal-ondemand.ncsa.illinois.edu/
```

- Input your Login Information

NCSA Web Login Service

https://idp.ncsa.illinois.edu/idp/profile/SAML2/Redirect/SSO?execution=e1s1

Files Apps

This Open OnDemand application provides a web-based file explorer that allows the user to remotely interact with the files on the HPC center's local file system. This application uses Node.js as the code base and is based on the CloudCommander file explorer app.

The Files app provides access to create files and folders, view files, manipulate file locations, upload files, and download files. It also provides integrated support for launching the Shell App in the currently browsed directory as well as launching the File Editor App for the currently selected file.

Home Directory

Jobs Apps

Active Jobs App

This Open OnDemand application provides a web-based view of the current status of all the available jobs on the batch servers hosted by the HPC center. This application is built with the Ruby on Rails web application framework.

The Active Jobs App displays all the available jobs in a dynamically searchable and sortable table. The user can search on job id, job name, job owner, charged account, status of job, as well as the cluster the job was submitted to. Progressive disclosure is used to show further details on individual jobs by clicking in the "right arrow" to the left of a table row.

Job Composer App

This Open OnDemand application provides a web-based utility for creating and managing batch jobs from template directories. This application is built with the Ruby on Rails web application framework.

The Job Composer App attempts to model a simple but common workflow that typical users of an HPC center use. When users create new batch jobs they will follow the given workflow:

- Copy a directory of a previous job, either one of their previous jobs or a job from a group member
- Make minor modifications to the input files
- Submit this new job

The screenshot shows the Job Composer web interface. The top navigation bar includes the ILLINOIS NCSA logo, 'Job Composer', 'Jobs', 'Templates', and a 'Help' link. The main heading is 'Jobs'. Below it, there's a '+ New Job' button and a star icon. A toolbar contains 'Edit Files', 'Job Options', 'Open Terminal', and status icons (play, stop, delete). A search bar and a 'Show 25 entries' dropdown are present. The main table lists jobs with columns: Created, Name, ID, Cluster, and Status. The right sidebar shows 'Job Details' for the selected job 'tensorflow mnist', including 'Submit to: hal', 'Account: Not specified', 'Script location: /home/dmu/ondemand/data/sys/myjobs/projects/de...', 'Script name: submit.sb', and 'Folder Contents: submit.sb, tensorflow_mnist.py'.

Created	Name	ID	Cluster	Status

Clusters Apps

Shell App

This Open OnDemand application provides a web-based terminal that connects the user through an SSH session to either the local machine or any other machine allowed within the internal network. Typically this will connect the user to a login node. This application uses Node.js for its exceptional support of WebSockets providing a responsive user-experience as well as its event-driven framework allowing for multiple sessions simultaneously.

The terminal client is an xterm-compatible terminal emulator written entirely in JavaScript. The Shell App uses the Google client hterm for this. It performs reasonably well across most modern browsers on various operating systems. It is currently used by the developers of Open OnDemand quite a bit.

A screenshot of a web browser window displaying a terminal session. The browser's address bar shows the URL `https://hal-ondemand.ncsa.illinois.edu/pun/sys/shell/ssh/hal-login2.hal.ncsa.illinois.edu`. The terminal window has a title bar that reads "Dashboard - HAL OnDemand" and "dmu@hal-login2:~". The terminal content includes a stylized ASCII art logo at the top, followed by an "INTRODUCTION:" section. This section explains that the Slurm Wrapper Suite (version v0.4) is designed to help users use the HAL system efficiently and lists its components: "swrun", "swbatch", and "swqueue". It also provides instructions on using the "-h" option for usage details. An "IMPORTANT NOTE:" section follows, stating that the HAL system partitions have been updated and that the Slurm Wrapper Suite and original Slurm use different partitions under swsuite-v0.4. It then lists available partitions for Slurm Wrapper Suite users (CPU and GPU jobs) and for HAL-OnDemand users (CPU, GPU, and debug jobs). A link to the fairshare policy is provided. The terminal concludes with the "HAL SYSTEM 2021 PM SCHEDULE:" for December 8th. The prompt at the bottom is `[dmu@hal-login2 ~]$`.

```
Host: hal-login2.hal.ncsa.illinois.edu
Themes: Default

=====

INTRODUCTION:

The Slurm Wrapper Suite was designed to help users to use the HAL system efficiently.
The current version is "swsuite-v0.4", which includes "swrun", "swbatch" and "swqueue".

Please use "-h" option for usage details.

If you are already familiar with the Slurm scheduling system, native Slurm commands
are also available. Please read below for the difference in available partitions.

IMPORTANT NOTE:

We have updated the partitions of HAL system. The Slurm Wrapper Suite and original
Slurm are using different partitions under swsuite-v0.4.

For Slurm Wrapper Suite users, the available partitions are:
cpun1, cpun2, cpun4, cpun8, cpun12, cpun16      : (CPU Jobs)
gpux1, gpux2, gpux3, gpux4, gpux8, gpux12, gpux16 : (GPU Jobs)

For HAL-OnDemand users and users using native Slurm commands, the available partitions
are:
cpu : (CPU Jobs)
gpu : (GPU Jobs)
debug : (Short jobs - higher priority)

Visit https://go.illinois.edu/halfairshare to view our fairshare policy and your
current usage. Requests for reservations from users with high recent usage may be
denied at the discretion of the admin team.

=====

HAL SYSTEM 2021 PM SCHEDULE:
- Dec 8th

=====

[dmu@hal-login2 ~]$
```

Interactive Apps

H2O-AI

The interactive H2O-AI app that your users will use to launch an H2O-AI flow Server within a batch job on a compute node. The user will then be able to connect to the running server through their browser and take advantage of the resources provided within the batch job.

- Input Requested Hours and Reservation Name

- Wait for 1-2 Minutes then click **Connect to H2O-AI** button
