

# February NCSA Security Talk

On Wednesday, members of the NCSA security team gave a group presentation on different topics impacting NCSA staff and assets. The talk began with Security Engineer Paul Guder reviewing helpful tips for generating and managing passwords. Next, Lead Security Engineer Chris Clausen shared the various tools they use to conduct vulnerability scanning. Then, Sr. Security Engineer Kay Avila reviewed DUO, the two-factor authenticator used for protecting NCSA assets. And, Sr. Security Engineer Leandro Avila-Diaz gave a refresher on email phishing scams that commonly occur in a work environment. Paul ended the presentation by directing people to the [Security Operations Wiki](#), highlighting resources the security team have put together to help support and educate staff.
