

Setting up Cyberintegrator Server

1. (Optional) create user and switch to this user (example: cyberintegrator)
2. download the correct binary at <https://opensource.ncsa.illinois.edu/jenkins/job/CyberintegratorServer/>
3. unzip the binary
4. install the startup script
 - a. copy the example script to the location of startup script

ubuntu

```
cp [location of binary]/service/cyberintegrator.ubuntu /etc/init.d/cyberintegrator
```

- b. modify the script according to your setting
- c. make file executable

```
chmod 755 /etc/init.d/cyberintegrator
```

- d. update rc and start the server

ubuntu

```
update-rc.d cyberintegrator defaults  
/etc/init.d/cyberintegrator start
```
