

Status Report August 12, 2011

Work Completed

- KISTI
 - Worked on installing and getting ELF running on Ranger. I am working through qsub submission issues with help from AI. Ranger is setup differently than other machines ELF is running on.
 - Tested PTPFlow client login for Yong Wook. I was not receiving the cert expired warning so I provided suggestions on checking the grid certificate. The issue was resolved.
 - I did not get to updating PAW Authentication. I will need guidance on setting up my dev environment and running the current code. When I downloaded the source code I was getting build errors.
- Cyberintegrator
 - None
- Medici
 - None

Work Planned

- KISTI
 - Install and Test ELF on Ranger HPC
 - Update PAW authentication to store certificates with our X509CertificateBean
- Cyberintegrator
 - None
- Medici
 - None

Comments

This week went mostly as planned. It is taking longer than anticipated to setup ELF on the Ranger system.
