

tacc lonestar setup page

Need to set one's environment like this:

```
login1$ cat .profile_user
#!/bin/bash
module load intel/11.1
module load java64/1.6.0
module unload mvapich2
module load openmpi
#module swap mvapich openmpi
login1$
```

In PTP, set:

Target system configuration: edu.utexas.tacc.lonestar.sge.batch

Queue: development

Parallel environment: 12way 12

Also, set the environment variable MY_NSLOTS to 5 by doing the following:

1. Select the Environment tab
2. Click **New**
3. In the **Name** field, enter MY_NSLOTS
4. In the **Value** field, enter 5
5. Click **OK** to close the New Environment Variable dialog
