

MRD Public Space Home Page

Software Projects

NOTICE: The documentation provided below on the "workflow broker" refers to a version of that service which is no longer supported. Much of the page is also lagging (the Ogrescript user's guide is missing entries for a number of new tasks). The following links refer to more recent work:

- For the most recent description of the workflow engine, see [PWE2008](#).
- Some guidelines for using version 3.0+: [Siege_3.0](#).
- For ongoing thoughts concerning the integration of PWE with [PTP](#), see [PTPFLOW](#).
- Download of [PTPFLOW](#).
- Download of [ptpflow-examples](#).

The most up-to-date documentation is now being made available as Eclipse Help Pages (ncsa.eclipse.help plugin) distributed on the [PTPFLOW](#) update site.

The following (especially [Workflow Broker](#)), are out of date:

Libraries

Name	Description
Trebuchet	Multi-protocol file transport library
Ogrescript	Extensible XML scripting language

Agents & Containers

Name	Description
Elf	Robust, extensible container for remotely launched scripts
Trigger Agent	Manages remote actions

Web Services

Name	Description
Workflow Broker	Scalable, high-level control-flow service with parameterization capabilities for generating and managing ensemble-like workflows
Event Repository	Persistent store for accessing historical event info
Host Information Service	Information service holding host-based data
Tuple Space	Tuple-space-like service for distributed exchange of serialized XML objects

Graphical User Interfaces

Name	Description
Siege	Extensible front-end client based on Eclipse Rich Client Platform

Guides
