

2015-07-31 Developer Meeting

Attendees

- [Lengyue Chen](#)
- [Unknown User \(mfelarca\)](#)
- [Lisa Xu](#)

Agenda/Notes

- [Unknown User \(mfreemon\)](#) was on vacation, so we had a very simple agenda of basic updates regarding in-progress tasks and general concerns
- Originally planned on having a meeting on both 2015-07-27, as well as 2015-07-31, however [Unknown User \(mfelarca\)](#) was sick Monday and half of Tuesday, so it didn't happen.
 - [Unknown User \(mfelarca\)](#) and [Lengyue Chen](#) met on 2015-07-29 to discuss in-progress tasks and determine if there were any issues that were blocking progress.
 - It was determined that no blocking elements were present. Both parties were continuing to review existing tutorials.
 - It was determined that the Django tutorials were a prerequisite for the Django restframework tutorials
 - Determined that nds-dashboard is currently not using nds-django
 - Discussion of existing requirements and API to be planned to determine if nds-django project can be simply transitioned to, or if additional work is needed for integration
 - [Unknown User \(mfelarca\)](#) is creating a wiki page that reviews the basic REST API for the nds services as defined by the nds-django project
 - this will reflect the current implementation right now – but will be the basis for the followup discussion with Ian regarding upcoming changes that might be needed
 - Stood up basic nds-django project, including clone and setup of the submodule ythub_workers. Further follow up regarding integration with full nds-labs environment to be tested
- Repository naming
 - Successful export of existing nds-webservice repository to new nds-labsenvironment repository
 - Includes all existing commits and branches
 - development branch will be cleaned to serve as the new basis for the current infrastructure
 - Creation of new repository for user interface to handle NDS Labs environment creation and administration

Future Agenda Topics

- [Jeff Terstriep](#) suggests a discussion of role of VMs and docker as a future topic
- follow discussion up with [Ian Taylor](#) regarding
 - REST API definitions for nds-django
 - details on how to use common UI elements in both Dashboard and Explorer
- Coordination with Kieran Evans (original nds-django author) regarding verification of existing understanding and discussion for future directions and implementation
