Nebula Home

Nebula EOS

Hello Everyone,

It is with some sadness but also with much anticipation that we are announcing the end of Service for NCSA's Nebula cluster. It's replacement, the new Radiant cluster, is available for use and will provide greatly expanded capabilities from Nebula while keeping a similar user interface. Information about the Radiant system is available at https://wiki.ncsa.illinois.edu/display/PUBCR/Radiant. We also encourage everyone interested to join the Radiant/Openstack Slack discussion channel at https://ncsa-at-illinois.slack.com/archives/C029BMTFQT1.

The official date of retirement for all Nebula services is January 17, 2022. All system access will be disabled at close-of-business that Monday. If you have any questions or concerns, or would like assistance with project or data migration, please send email to help@ncsa.illinois.edu for assistance.

Nebula is NCSA's OpenStack system.
