CILogon 2.0 Project Begins

The CILogon 2.0 project officially launched this month. The project integrates and expands on the existing open source CILogon and COmanage software to provide an integrated identity and access management (IAM) platform for cyberinfrastructure. The platform combines the federated identity management capabilities of CILogon with the collaborative organization management capabilities of COmanage, with an emphasis on supporting international research collaborations via eduGAIN. The 3 year project, funded by NSF award number 1547268, is a collaboration between NCSA and Spherical Cow Group. Visit CILogon News for more details.
