Getting Started with MAEviz

Introduction

Here you will find information on how to work with MAEviz using your own data and input parameters. This includes what fields must be present in datasets, the data type for each field (e.g. string, integer, etc), and some of the input parameters you will see on MAEviz analysis pages. These input parameters may require you to contact an expert to obtain the inputs for your region (e.g. geology information for your region).
