

Status Report November 20, 2009

Work Completed

- Worked on KISTI proposal, added text and references
- Worked on material for MAE Hurricane ERC meeting
- Worked on applying visualization styles to shapefiles in the data catalog and then saving the state. I am currently trying to get styles to apply properly, some API changes have occurred between the GeoTools we are using for MAEviz and what we have been using for Bard. If there is time this week, I will talk to Jong and have him look at what I am trying to do.

Work Planned

- Work on KISTI proposal
- Work on material for Hurricane ERC meeting at O'Hare on Tuesday November 24, 2009
- Continue working on saving visualization state for data catalog beans.

Comments

This week went as planned. The work for the Hurricane ERC meeting bumped some of my planned time on the data catalog.
